College Curriculum Committee (CCC) – update from the School of Education & Health’s Curriculum Committee submitted via Jeff Cherubini, Chair of the Department of Kinesiology.

During the 2017-2018 academic year, the Department of Biology proposed changes to their curriculum, via BIOL 207-210 Anatomy & Physiology, which adds 2 additional credits to Kinesiology student’s current programs of study. In order to compensate for these changes (without adding additional credits to our programs), the Department of Kinesiology voted upon and unanimously approved the following changes:

- Physical Education Teacher Preparation Majors
  - Current courses KIN 228 Gymnastics & Tumbling (2 credits) and KIN 327 Rhythmic Activities (2 credits) were combined into one 2 credit course KIN 229 Gymnastics & Rhythmic Activities. The combined course has been approved and will begin spring 2019.

- Exercise Science Majors
  - A two credit Kinesiology elective was removed from Sophomore Year.

These changes not only compensate for the added credits from Biology, they also make sense from a curriculum/content perspective. **On Thursday April 5th these changes were approved from the School of Education & Health’s Curriculum Committee.**
